Web and virtualization  
technology

Security and stability

Performance and efficiency

Dynamics and continuity

**Require performance? Looking for security? Expect reliability? Want economic efficiency?  
Then decide in favor of a powerful combination: PRIMERGY servers from Fujitsu Siemens Computers and  
Microsoft Windows Server® 2008. Our offer for all your business requirements – the competence of two  
strategic partners to implement the Dynamic Data Center.**

### **2 for 1: Your business success**

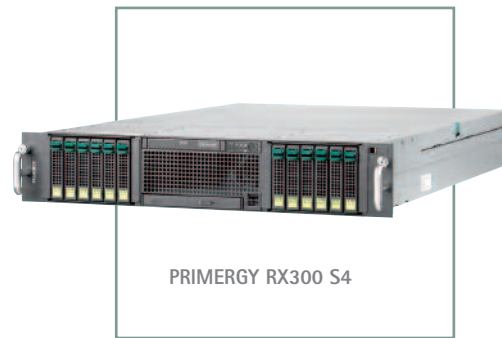

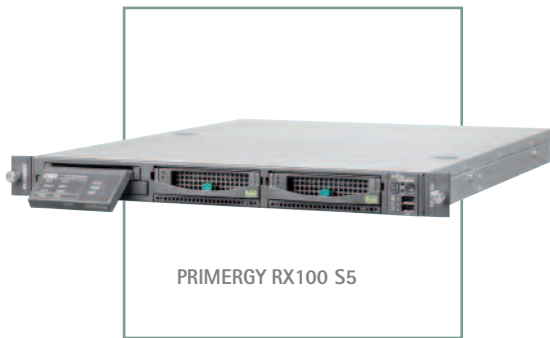

Windows Server 2008 with its integrated web and virtualization technology and PRIMERGY Servers with their high degree of standardization, flexibility and energy efficiency constitute a sound basis for every business. Regardless of what happens, together they keep your business up and running and help you effectively optimize IT operations.

New functions, such as Server Core, PowerShell, Windows Deployment Services, and enhanced network technologies make Windows Server 2008 a resilient and at the same time flexible platform. Moreover, PRIMERGY Servers help you to perform particularly well in every situation, ensuring optimal returns on investment and contributing towards environmental protection at the same time. This is particularly valid for the PRIMERGY TX120, probably the world's most energy-saving server and at the same time extremely quiet and small but with tremendous power. Windows Server 2008 and PRIMERGY combine to drive your business forward.

→ For web efficiency

Are you looking for a low-priced web platform? Then decide in favor of **Windows Server 2008 with PRIMERGY RX100 S5**, a great combination for powerful, reliable and efficient web sites. Windows Server 2008 offers you improved administration, diagnosis

and development tools. And PRIMERGY RX100 S5 provides everything you want from a web server: Quad-Core performance, SAS and SATA hard disks or a cutting-edge remote management controller. All in a space-saving 1U rack chassis at an attractive price.

→ For successful virtualization

Are you planning to consolidate your servers? What about optimizing your infrastructure at the same time? **Windows Server 2008 and PRIMERGY RX300 S4** is your ticket to enter the world of service-oriented IT operations. Rely on the integrated virtualization technology provided by Windows Server 2008 to optimally and flexibly use your server resources and minimize

the costs of your IT infrastructure. And best of all - use the cutting-edge virtualization server: PRIMERGY RX300 S4. Its full redundancy, dual-socket Quad-Core performance, an innovative cooling system and easy-to-expand features ensure optimal energy efficiency without any loss in performance yet with maximum reliability and optimal protection for your investment.

→ For absolute security

You require uncompromising security for your business? Then you just cannot ignore **Windows Server 2008 and PRIMERGY servers** from Fujitsu Siemens Computers. Windows Server 2008 is even more reliable and offers numerous innovative security functions, such as Network Access Protection, Federated Rights Management or Read-only Domain Controller.

PRIMERGY servers make this concept a safe bet for your business. For example, as a result of the trusted platform module, multi-password BIOS protection, logical codes for external interfaces and devices or due to encrypted server management communication. One thing is for sure: You can calmly concentrate on your business.

→ For all business requirements

**Fujitsu Siemens Computers and Microsoft** - the ideal combination to optimize your IT infrastructure. We not only offer you first-class software and top-class hardware, but also world-class solutions for all your business requirements. How can we drive your business forward?
